

Koss Sanitary Floor Resting Plates

Easy, consistent equipment positioning

We understand the importance of proper equipment positioning which is why we designed Koss Sanitary Floor Resting Plates. When regularly moving and returning equipment to a specific location, close enough is not good enough. Our floor resting plates, or shoes, are designed for use with the ball toe versions of our 3-A Leveling Feet and make precise positioning easy time after time.

Our floor resting plates also prevent “walking” or migration of equipment due to vibration during operation or cleaning cycles. They also help with weight distribution and can be used on a wide variety of footed machinery and assemblies.

Koss Sanitary Floor Resting Plates features:

- Easy, accurate positioning every time
- Center dimple in each plate
- Drainage channel in each plate
- Improves equipment weight distribution
- Helps prevent equipment migration due to vibration
- Sanitary stainless steel
- Easily secure to floor with bolts

Place your equipment’s ball toes into the dimples of our Sanitary Floor Resting Plates to ensure consistent, accurate machine placement, prevent migration, and aid with weight distribution.

Koss Sanitary Floor Resting Plates

Size of Koss 3-A Leveling Feet (O.D.)	Plate Style / Size (inches diameter)	Bolt Hole (inches diameter)	Floor to Dimple Height (inches)	Overall Plate Height (inches)	Part Number	Stock Number
